

JobNest – Smart Job Portal for Career Growth

Abstract:

JobNest is a web-based application developed to streamline and modernize the job recruitment process for both job seekers and recruiters. Built using the MERN stack (MongoDB, Express.js, React.js, and Node.js), the platform provides a centralized and user-friendly environment where individuals can search for job opportunities, apply for positions, and manage their professional profiles, while recruiters can efficiently create, update, and manage job listings.

The system enables job seekers to explore job openings based on their skills, qualifications, and preferred locations. Each job listing includes detailed information such as job role, required skills, salary range, and company details. Users can upload resumes, track application status, and receive updates throughout the hiring process. Additionally, the platform offers personalized job recommendations, while recruiters can review applicants, filter candidates, and communicate directly with them to streamline hiring.

The application also includes dedicated dashboards for both job seekers and recruiters to monitor activities such as job applications, postings, and interactions. Secure authentication and role-based access control ensure data privacy and system reliability. Overall, JobNest provides an efficient, scalable, and user-friendly solution that bridges the gap between talent and opportunity, making the recruitment process faster and more effective.

Module Description:

Job Seeker

- Secure registration and login for users.
- Create and manage personal profile with skills, experience, and resume upload.
- Search and filter jobs based on location, skills, salary, and job type.
- View detailed job descriptions including company, requirements, and salary.
- Apply for jobs and track application status (applied, shortlisted, rejected).
- Save/bookmark jobs for future reference.
- Receive notifications and communicate with recruiters.

Recruiter

- Secure login for recruiters.
- Create, update, and delete job postings with detailed information.
- View and manage job applications.
- Filter candidates based on skills, experience, and qualifications.
- Update application status (shortlisted, rejected, hired).
- Communicate with applicants through chat or messaging system.

Admin

- Manage user and recruiter accounts.
- Approve or reject recruiter registrations.
- Monitor all job postings and remove inappropriate content.
- View all applications and system activity.
- Maintain categories such as job types, skills, and locations.
- Ensure overall system security and performance.
